

Salesforce to slack integration

Install the Slack Platform Connector

Ensure you're logged in as the admin for your Agentforce org. To double-check, refresh your browser, click on your profile at the top right of your org, and view your username. You'll install the Slack connector package next. You'll need your admin access for this.

1. To install the Slack Platform Connector app, click [this](#) link.
2. Log in with your Agentforce org admin credentials.
3. Select **Install for All Users**.
4. Check the box to acknowledge installation of the app.
5. Click **Install**.

The screenshot shows the 'Install slack-platform-connector' screen. At the top, there's a green download icon and the text 'Install slack-platform-connector By Slack'. Below this are three installation options: 'Install for Admins Only' (radio button), 'Install for All Users' (radio button, selected), and 'Install for Specific Profiles...' (radio button). A yellow warning banner states: 'You're installing a Non-Salesforce Application that is not authorized for distribution as part of Salesforce's AppExchange Partner Program.' Below the banner is a checkbox labeled 'I acknowledge that I'm installing a Non-Salesforce Application that is not authorized for distribution as part of Salesforce's AppExchange Partner Program.' with 'Install' and 'Cancel' buttons. At the bottom, there's a table with app details and a description.

App Name	Publisher	Version Name	Version Number
slack-platform-connector	Slack	Mar 28 2024 Released	1.2

Description
includes existing available oauth scopes

Additional Details [View Components](#)

6. Installation can take a few minutes. When the installation completes, click **Done**.

SETUP
Installed Packages

Installed Packages [Help for this Page](#)

On AppExchange you can browse, test drive, download, and install pre-built apps and components right into your salesforce.com environment. [Learn More about Installing Packages.](#)

Apps and components are installed in packages. Any custom apps, tabs, and custom objects are initially marked as "In Development" and are not deployed to your users. This allows you to test and customize before deploying. You can deploy the components individually using the other features in setup or as a group by clicking Deploy.

Depending on the links next to an installed package, you can take different actions from this page.

To remove a package, click **Uninstall**. To manage your package licenses, click **Manage Licenses**.

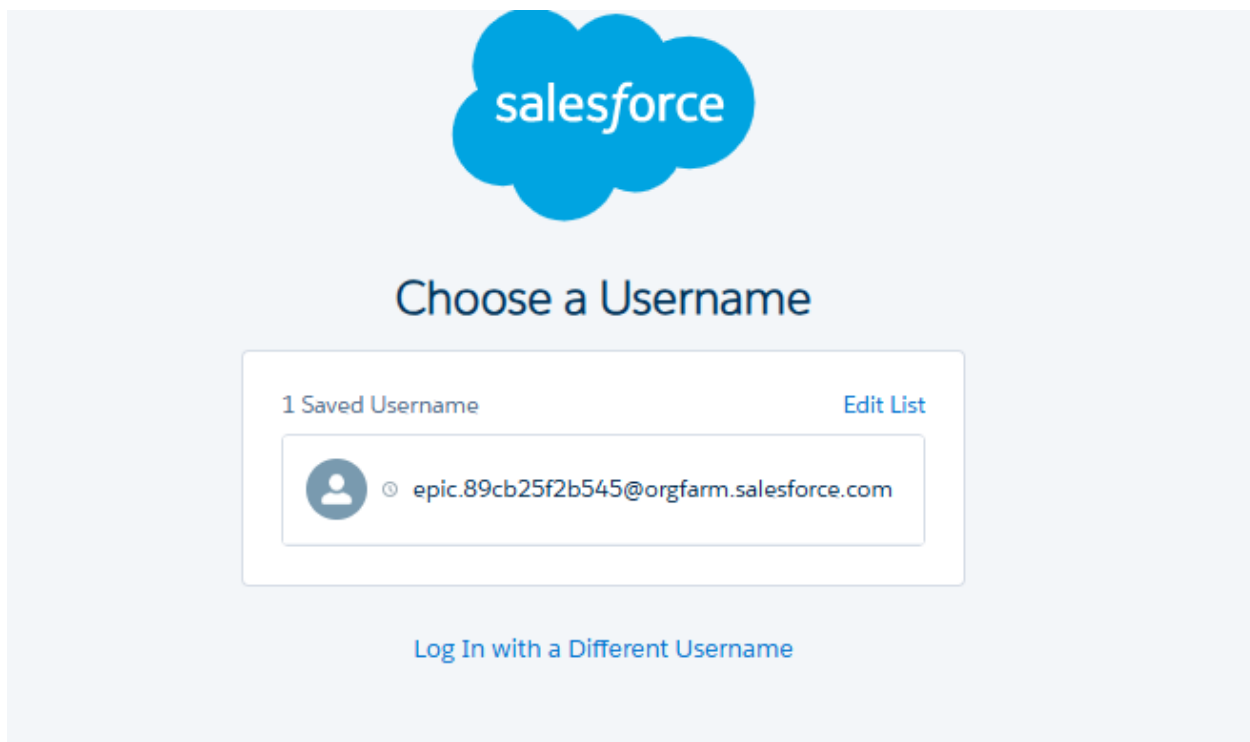

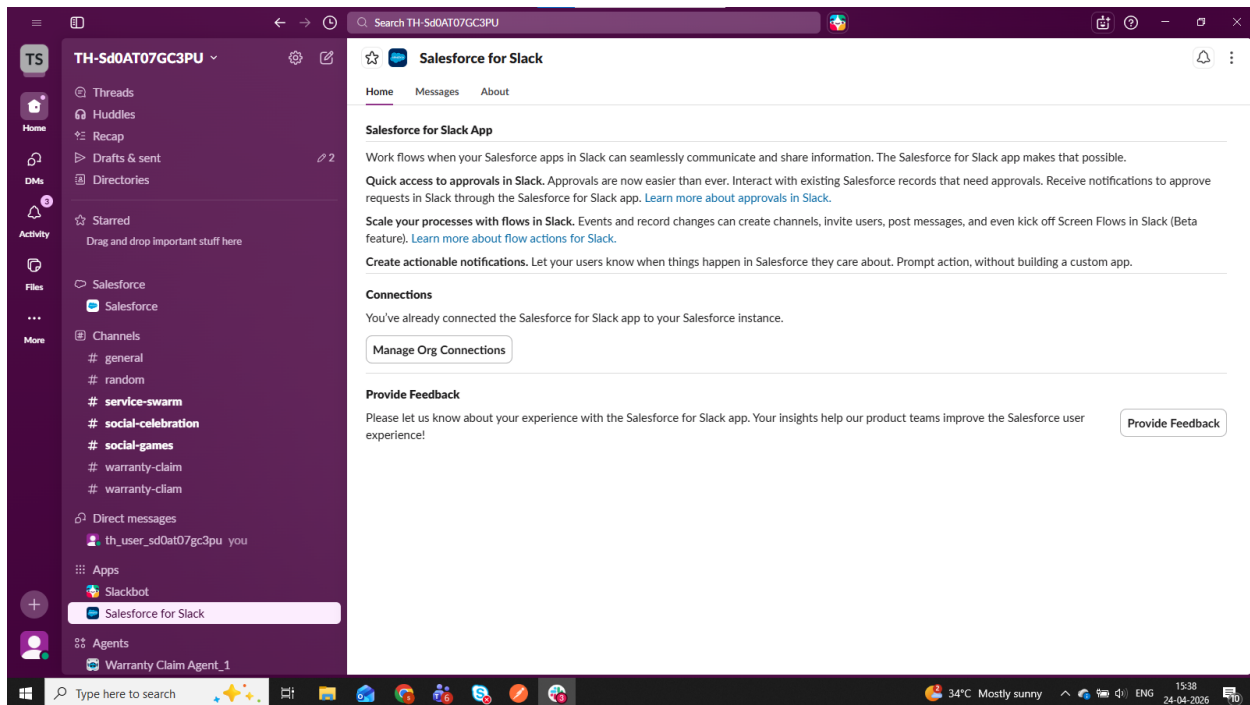

Installed Packages

Action	Package Name	Publisher	Version Number	Namespace Prefix	Install Date	Limits	Apps	Tabs	Objects	AppExchange Ready
Uninstall	Salesforce Connected Apps	Salesforce.com	1.7	sf_com_apps	2/11/2025, 1:41 PM	✓	0	0	0	Not Passed
Description This package contains Connected Applications for all the officially supported Salesforce client applications such as Touch, Salesforce for Outlook, Sa										
Uninstall	slack-platform-connector	Slack	1.2	slackplatform	2/11/2025, 2:26 PM	✓	0	0	0	Not Passed
Description Connected App that enables Slack Platform 3rd party auth to connect.										

7.

Connect Salesforce with Slack

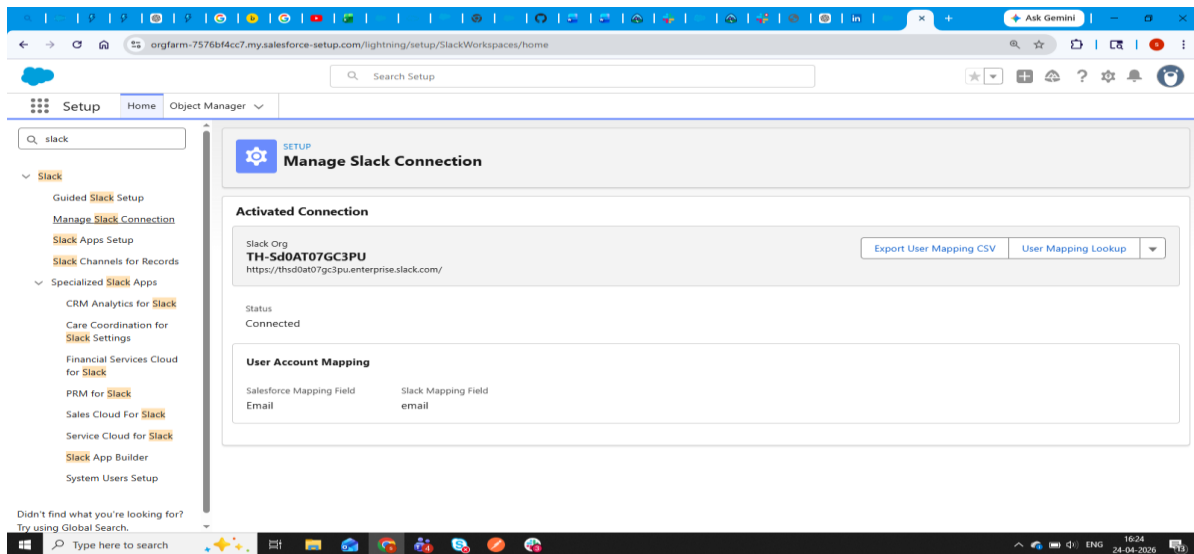

8. Open **Slack**.
9. Navigate to:
 - a. **Tools → Apps → Salesforce (Legacy App)**
10. Open the Salesforce app in Slack.
11. Log in using your Salesforce credentials (username & password).
12. Authorize the connection.

Approve Slack Connection in Salesforce

1. Go to **Salesforce Setup**.
2. Navigate to **Slack → Manage Connections**.
3. Locate the pending Slack connection request.
4. Click **Approve**.
5. Map Salesforce users with Slack users using their **email addresses**.

request and approve and map the users by email

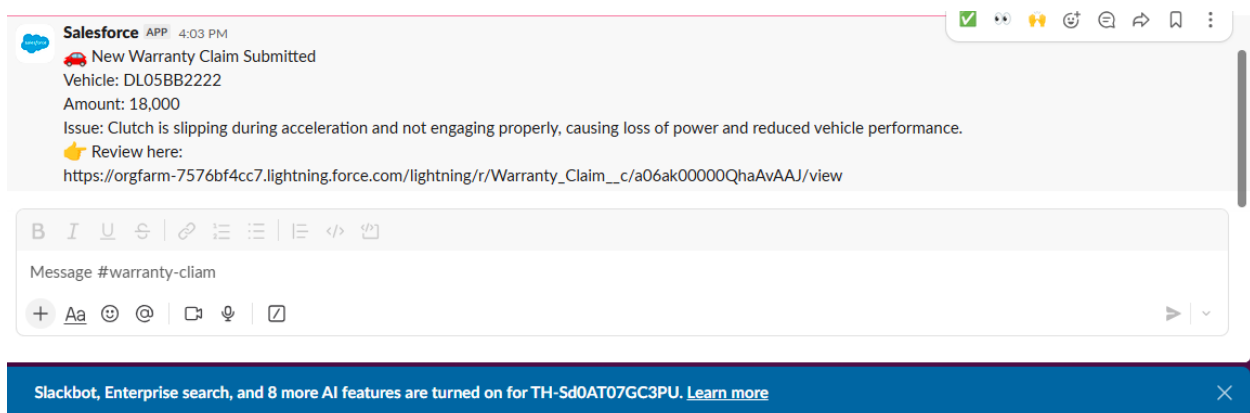

4. Create Slack Channel

1. In Slack, create a new **channel** (e.g., #warranty-approvals).
2. Copy the **Channel ID** (required for automation in Salesforce).

create one triggered flow in salesforce when ever warranty claim object in create a record then send one notification to slack

5. Create Record-Triggered Flow in Salesforce

1. Go to **Setup → Flows**.
2. Create a **Record-Triggered Flow** on the **Warranty Claim Object**.
3. Configure the flow:
 - a. Trigger: **When a record is created**
 - b. Action: Send a notification to Slack channel
4. Use the Slack action:
 - a. Provide **Channel ID**
 - b. Customize message (e.g., Claim details, amount, status)

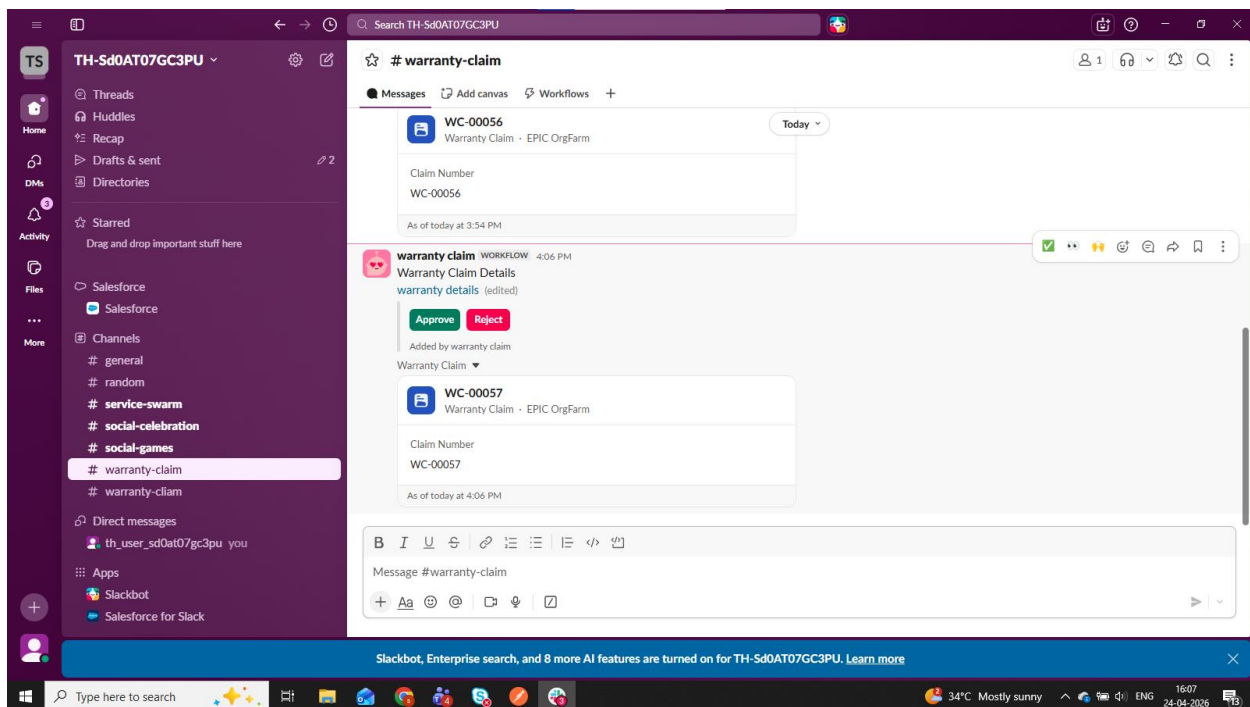

6. Configure Approval Logic

Scenario: High-Value Warranty Claims

- If **Claim Amount > Approval Limit**:
- Status = pending Approval
 - Send notification to **Approver in Slack**

Steps:

1. Create a **Slack user** for the approver.
2. In Flow:
 - a. Add a **Decision Element**:
 - i. If amount exceeds limit → Send approval request
3. Send Slack message with:
 - a. Claim details
 - b. Approval/Rejection options

Handle Approval Response

1. When approver responds in Slack:

- a. **If Approved:**
 - i. Update Warranty Claim Status → **Approved**
 - b. **If Rejected:**
 - i. Update Warranty Claim Status → **Rejected**
- 2. Ensure:
 - a. Flow or Apex handles response parsing
 - b. Status is updated automatically in Salesforce
